

Providing customized concrete and material solutions for more than 40 years
The Pioneer in volumetric concrete mixing and aggregate
Proudly serving Manitoba, Saskatchewan and NW Ontario

SPECIALIZED CONCRETE & MATERIAL SERVICES

COMING SOON! EXCITING COLOUR OPTIONS IN CONCRETE!

Integral colouring is most often used in exterior applications. The use of integral colours does not affect the freeze thaw durability of concrete. Integral colouring is also ideal when combined with deep grinding polished concrete applications, where the surface is removed. Integral colouring does not increase wear resistance and surface density like surface colouring.

Integral Pigment Colour Benefits

- Ideal for exterior Applications with air entrained concrete
- Ideal for deep grind exposed aggregate polished concrete applications
- Coloured throughout the concrete
